

D2.1 Virtual patients & Scenario vignettes prototype deployment

Deliverable number	D2.1
Delivery date	Jun 2019
Status	Final
Authors	Ioanna Dratsiou, Panagiotis E. Antoniou

Improving the Identification and Management of Patients with Atrial Fibrillation (AF) in Order to Reduce Stroke Risk and Venous Thromboembolism (VTE) in Eastern Europe

Grant ID 42537945

Introduction

This document is the accompanying leaflet of the digital virtual patient (VP) and vignette resources that have been developed from the material provided by the medical experts of the DEEPRAFT project as described in D1.2.

This short document includes, beyond this introductory note, the singular Digital Links Archive section that includes the hyperlinks to the 2 complex VP cases regarding Atrial Fibrillation and Venous thromboembolism (AF/VTE), for educating doctors on the subject, and the 10 short vignettes, for informing the patients and the general public.

It must be noted that this document describes the non-localized English versions of these resources. As these resources are adapted to each country's language and medical practices the relevant links will be archived in D3.1
